conductance versus the modified COMFORT sedation score as a measure of discomfort in artificially ventilated children. Pediatrics 2008; 122:e848–53

Mariani’s Coca Plant

In 1863 a Corsican native named Angelo Mariani (1838–1914) became one of France’s most famous and wealthy chemists by concocting a “coca wine” that would be marketed worldwide as “Vin Mariani.” Hailed as a panacea by thousands of leading physicians, this cocaine-and-Bordeaux tonic was even publicly endorsed from London by Queen Victoria and from Rome by at least two Popes. One of Mariani’s many coca-inspired illustrations is this example (above, courtesy of the Wood Library-Museum), his Reproduction of a Coca Plant Presented by Mr. Mariani to the Paris Botanical Gardens. His Vin Mariani would inspire the development of America’s leading cocaine tonic, Coca Cola. (Copyright © the American Society of Anesthesiologists, Inc.
