History tells us that the etherizer who first publicly demonstrated surgical anesthesia was William Thomas Green Morton (1819–1868). However, the muse Clio seems confused as to whether Morton was born at the site above on August 9 or 19. A retired Editor of *Anesthesiology*, watercolorist and anesthesiologist Leroy D. Vandam (1914–2004), after visiting Morton’s birthplace, had observed that the “original Morton house was a large, square old-fashioned wooden house on a farm that was deeded to William Thomas Green Morton’s mother, Rebecca, by her father, John Stevens.” Because the original Morton house had burned, its successor was the edifice (above) that Professor Vandam captured with watercolors. As a benefit for the Wood Library-Museum, just a few of the 100 prints signed by the late Dr. Vandam remain available for sale. (Copyright © the American Society of Anesthesiologists, Inc. This image appears in color in the *Anesthesiology Reflections* online collection available at www.anesthesiology.org.)

George S. Bause, M.D., M.P.H., Honorary Curator, ASA’s Wood Library-Museum of Anesthesiology, Park Ridge, Illinois, and Clinical Associate Professor, Case Western Reserve University, Cleveland, Ohio. UJYC@aol.com.
